Election/Restrictions

Claims 9-12, 14, and 17 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 6.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Calabria. The cited patent discloses a catheter having proximal and distal ends, a distal inlet port, a lateral surface, and a lumen extending between the proximal and distal ends; an occlusive member affixed to the distal end of the catheter; and at least one intake port disposed in the lateral surface proximal to the occlusive member, the blood intake port configured to induce venturi-assisted retrograde flow in a treatment vessel via the distal inlet port.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 3763

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-8, 13, 15, 16, and 18-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bagaoisan, et al., in view of Muni, et al. The Bagaoisan, et al., patent discloses a catheter having proximal and distal ends, a distal inlet port, a lateral surface, and a lumen extending between the proximal and distal ends; an occlusive member affixed to the distal end of the catheter; and at least one intake port disposed in the lateral surface proximal to the occlusive member, the blood intake port configured to induce venturi-assisted retrograde flow in a treatment vessel via the distal inlet port. Please review figures 8C and 18. Bagaoisan, et al., however, does not disclose the use of a self-expanding woven mesh having a contracted and expandable state. However, such use is conventional as evidenced by the teachings of Muni, et al. The Muni, et al., patent shows in figure 12, the use of a mesh to occlude the vessel. Accordingly, based on the above conventionality, a person of ordinary skill in the art would consider the

Art Unit: 3763

modification of an inflatable occlusive member for a mesh-type occlusive member, an obvious design alternative.
